

Connecting Your Outreach Aliases to Instantly

A 15-minute, three-part setup using IMAP/SMTP. You'll sign Instantly in to your main mailbox, then have it send as each alias.

ellie@shopjaydees.ca

ellie@shopjaydees.net

Two outreach addresses are ready to connect: **ellie@shopjaydees.ca** and **ellie@shopjaydees.net**.

Both are **aliases** of your main mailbox, **hello@shopjaydees.com**. An alias doesn't have its own password or inbox — any email sent to it simply lands in your **hello@** inbox. So we connect them a little differently than a normal account: we sign Instantly in to your **main mailbox** (**hello@**), and then tell it to **send as** each alias.

This is completely doable and takes about **15 minutes**. There are three parts: a one-time Google security step, then connecting each alias in Instantly.

Questions at any point? Email cody@sixohquad.com.

1 Create a Google App Password (*one-time*)

Because your mailbox uses 2-Step Verification, Instantly can't sign in with your normal password — it needs a special **App Password**. You only need to make **one**; it works for both aliases.

1. Sign in to **hello@shopjaydees.com** at myaccount.google.com.
2. If 2-Step Verification isn't already on, turn it on first: **Security** → **2-Step Verification** → **Get Started**, and follow the prompts (you'll confirm a code sent to your phone).
3. Open the App Passwords page directly at myaccount.google.com/apppasswords — or type "**App passwords**" into the search bar at the top of your Google Account.
4. In the **App name** box, type **Instantly** , then click **Create**.
5. Google shows a **16-character password**. **Copy it now** and keep it handy for Part 2 — you won't be able to see it again after you close the window. (The spaces don't matter.)

Note: You don't need to turn IMAP on anywhere — Google leaves it on by default for all Workspace mailboxes. The App Password is the only thing you need from this step.

2 Connect ellie@shopjaydees.ca in Instantly

1. Go to app.instantly.ai and sign in.
2. Click **Email Accounts** in the left sidebar.
3. Click **Add New**.
4. In the pop-up, choose **Connect existing accounts**, then select **Any provider (IMAP/SMTP)**.
(Not the "Google" option — we use IMAP/SMTP because we sign in as `hello@` but send as the alias.)
5. Fill in the form exactly as below:

Field	What to enter
Email (the address you send from)	ellie@shopjaydees.ca
First name (optional)	Ellie
IMAP username	hello@shopjaydees.com ← your main mailbox, not the alias
IMAP password	the App Password from Part 1
IMAP host	imap.gmail.com
IMAP port	993
SMTP username	hello@shopjaydees.com
SMTP password	the App Password from Part 1
SMTP host	smtp.gmail.com
SMTP port	465

6. Click **Connect** (or **Save**). A green check or "connected" status means it worked.

The key idea: the **Email** field is the alias you want to send *from* (`ellie@shopjaydees.ca`), but the **username** for both IMAP and SMTP is always your real mailbox login (`hello@shopjaydees.com`). That pairing is what lets the alias send and receive correctly.

If it won't connect: re-check that the App Password was copied with no typos, that the username is `hello@shopjaydees.com` on **both** the IMAP and SMTP rows, and — if `465` is rejected — try SMTP port `587` instead.

3 Connect ellie@shopjaydees.net

Repeat **all of Part 2**, changing only the **Email** field to:

- **Email:** `ellie@shopjaydees.net`

Everything else stays identical — same `hello@shopjaydees.com` username, the same App Password, and the same hosts and ports.

4 Done — Cody takes it from here

Once both addresses show as **connected** in your Instantly Email Accounts list, let Cody know. He'll:

- Enable and configure **warmup** on both addresses
- Monitor deliverability while they build sending reputation

Warmup typically runs **2–3 weeks** before the addresses are ready for real campaigns. During that time they exchange automated emails behind the scenes — nothing you need to do.

Settings at a glance

	IMAP (receiving)	SMTP (sending)
Username	hello@shopjaydees.com	hello@shopjaydees.com
Password	your Google App Password	your Google App Password
Host	imap.gmail.com	smtp.gmail.com
Port	993	465 (or 587)
Send-from address	—	ellie@shopjaydees.ca / .net
